Data Summary

The following data is a product of the National Broadband Map (see page 6 for a complete description). In some cases, peer communities, as identified by the Roanoke Regional Partnership are used for comparison.

- About 8% of the population in the Roanoke MSA has access to fiber. Nationally, this number is 24%. Roanoke is well behind peer areas such as Fort Wayne, Indiana, Washington DC and Chattanooga. Nationally, this gives Roanoke a rank of 198 of 429 metro areas. In Virginia, Roanoke ranks 7 out of 11 metro areas in access to fiber.
- The Roanoke Valley has about a half dozen private companies with fiber networks. In some cases these are duplicative networks. Providers cooperate and compete at the same time, and offer desirable services to customers. Some networks are only for large users, but most existing fiber networks focus only on business customers. Some providers will not publically share the location of the networks. Even with these duplicative private networks, only 8% of the region's population is served. This is because most fiber does not serve the residential market, there are few last mile solutions, and costs are prohibitive. This leaves a literal "fiber gap", considering the access to fiber nationally is three times greater.
- In basic access to the Internet, Roanoke ranks 409th among 429 metro areas. While the ranking sounds low, it still means almost all people can access the Internet, even if at a low speed such as DSL. In Virginia, Roanoke ranks 10 out of 11 metro areas.
- The Roanoke MSA has better than average access to speeds greater than 100Mbps (fast cable modems). The Roanoke Valley has improved in this area over that past few years as Cox and Comcast have updated their networks.
- Roanoke does not have good access to very high speeds (1Gbps). About 4.5% of the population has potential access to these speeds in the Roanoke Valley, which is below the national average of 6.7%. Peer metro areas like Fort Wayne and Chattanooga are at more than 50% because they have made significant investments in broadband.
- Provider choice is limited in the Roanoke Valley. Eighty-nine percent of Roanoke MSA residents have two or less providers to choose from. Nationally, this number is 45%. In other words, 55% of the nation has more than two providers to choose from, while only 11% of the Roanoke Valley has more than two providers to choose from. Lack of competition adversely affects price and service.
- Botetourt County seems to have high access to fiber (33.9% of the population), but whether it is actually utilized, affordable, or actually accessible to residents is unknown.
- Over 5,000 people work from home in the Roanoke Valley according to the 2010 Census, and telework has increased 80% since 2005.
- Other details can be found in the following tables and attached reports.

**Select Metropolitan Statistical Areas

National Broadband Map Data

The National Telecommunications and Information Administration (NTIA) created and maintains the National Broadband Map, an unprecedented, searchable, public database of information on broadband Internet availability in the United States. NTIA created the National Broadband Map in collaboration with the Federal Communications Commission, using data that each state, territory and the District of Columbia (or their designees) collected from broadband providers or other data sources. (Source: NTIA, 2014)

The website resulting from this Federal-state partnership includes more than 25 million searchable records showing where broadband Internet service is available, the technology used to provide the service, the maximum advertised speeds of the service, and the names of the service providers. The data, to be updated every six months, will support efforts to expand broadband access in communities at risk of being left behind in the 21st century economy and help businesses and consumers seeking information on their high-speed Internet options. (Source: NTIA, 2014)

Data may be 6-12 months old, and some data may be missing if not shared by private providers. Coverage may be also being over-estimated based on data collection methodology. Data does not take into account actual usage (it measures potential usage), nor the cost or affordability of the service.

Roanoke Valley Alleghany Regional Commission staff prepared the following tables. Peer cities, used by the Regional Partnership were included in some of the Metro Area comparisons. A few of these metro areas have had large investments in fiber infrastructure. The Roanoke Metropolitan Statistical Area includes the Counties of Botetourt, Craig, Franklin and Roanoke and the Cities of Salem and Roanoke. Other MSAs in the nation are defined by the same population density and commuting standards and are comparable according to the Office of Management and Budget (OMB).
